

Agarose Tablets for Electrophoretic Applications

Benchmark Scientific introduced EZ Pack Agarose Tablets to its line of agarose products. EZ Pack Agarose Tablets eliminate the hands-on time and mess associated with weighing loose agarose. Each EZ Pack tablet contains 0.5 grams of multipurpose Agarose LE. The tablets are packaged in unique, blister packs to protect their integrity. To use, simply push the quick-dissolving tablet through the foil backing, add buffer and heat as usual. Agarose LE is suitable for a wide variety of electrophoretic applications. Highly purified, with a low EEO, Agarose LE is produced without the use of organic solvents, yielding a cleaner end product with significantly reduced environmental impact. Agarose LE is DNase, RNase and Protease free. Formulated for high gel strength and integrity, Agarose LE exhibits exceptional thermal stability and mechanical resistance, ensuring safe, easy handling.
